

London Cycling Campaign

3 February 2016

The London Cycling Campaign is the capital's leading cycling organisation with more than 12,000 members and 40,000 supporters. We welcome the opportunity to comment on these plans and our response was developed with input from our local Wandsworth group and from the co-chairs of our Infrastructure Review Group.

We welcome the creation of a no entry point at the northern end of Nightingale Walk. And the provision of a toucan crossing. But we would much prefer to see Nightingale Walk closed completely with a modal filter, or further treatment to entirely remove traffic from this already fairly low-traffic road. And we would prefer a Tiger crossing over The Avenue. Failing this, certainly more needs to be done to ensure motor vehicle speeds along Nightingale Walk are appropriately slow.

Finally, and in general, the London Cycling Campaign would like to see all schemes given a CLoS rating (as well as adhering to the latest London Cycle Design Standards) that demonstrates significant improvement from the current layout will be achieved for cycling, and that eliminates all "critical fails" in any proposed design before being funded for construction, let alone public consultation.
