

London Cycling Campaign response to Westminster 20mph speed limits

6 December 2019

<https://www.westminster.gov.uk/20mph>

About the London Cycling Campaign

London Cycling Campaign (LCC) is a charity with more than 20,000 supporters of whom over 11,000 are fully paid-up members. We speak up on behalf of everyone who cycles or wants to cycle in Greater London; and we speak up for a greener, healthier, happier and better-connected capital.

This response was developed with input from LCC's borough groups.

General comments on this scheme:

- The proposal to limit speeds on Westminster streets to 20mph is strongly supported. 20mph speed limits in urban areas demonstrably reduce dangerous driving, the hostility of roads, collisions, severity of collisions and as part of a wider range of measures can help reduce air pollution, car use and boost walking and cycling rates.
- However, 20mph speed limits on their own do not deliver significant changes in speeds of driving. Westminster must urgently consider, if 20mph is adopted as it should be, how it will reduce speeds in the borough using enforcement and/or physically redesigning streets. TfL's ["Achieving lower speeds: the toolkit"](#) is a valuable resource in this regard and should be used to limit driver speeds on the borough's streets. Similarly, it should urgently identify, working with the Metropolitan Police potentially, those roads where driver speeds are consistently above 20mph to prioritise changes for.

General points about infrastructure schemes:

- The Mayor's Transport Strategy relies on a growth in cycle trips to keep London moving. This means infrastructure schemes must be designed to accommodate growth in cycling. Providing space for cycling is a more efficient use of road space than providing space for driving private motor vehicles, particularly for journeys of 5km or less. In terms of providing maximum efficiency for space and energy use, walking, cycling, then public transport are key.
- As demonstrated by the success of recent Cycle Superhighways and mini-Holland projects etc., people cycle when they feel safe. For cycling to become mainstream and enable all ages and abilities to cycle, a network of high-quality, direct routes separate from high volumes and/or speeds of motor vehicle traffic is required to/from all key destinations and residential areas in an area. Schemes should be planned, designed and implemented to maximise potential to increase journeys –

with links to nearby amenities, residential centres, transport hubs considered from the outset.

- Spending money on cycling infrastructure has been shown to dramatically boost health outcomes in an area. Spending on cycling schemes outranks all other transport modes for return on investment according to a DfT study. Schemes which promote cycling meet TfL's "Healthy Streets" checklist. A healthy street is one where people choose to cycle.
- All schemes should be designed to enable people of all ages and abilities to cycle, including disabled people.
- Evidence from TfL and from many schemes in London, the UK and worldwide shows the economic benefits, including to businesses, to be found from enabling a wider range of people to cycle more. Further evidence shows how cycling schemes also benefit air quality and reduce climate changing emissions, as well as improving resident health outcomes and reducing inactivity, as mentioned above.
- LCC wants, as a condition of funding, all highway development designed to London Cycling Design Standards (LCDS), with a Cycling Level of Service (CLOS) rating of 70 or above, with all "critical issues" eliminated. Above 2,000 Passenger Car Unit (PCUs) motor vehicle movements per day, or 20mph motor traffic speeds, cycling should be physically separated from motor traffic.
